

VELOX

Setup Guide

Complete Walkthrough for Velox XAUUSD Deployment

Via ThinkMarkets Copy Trading

Version 1.0 | March 2026

Contents

- Required Apps & Platforms
- Before You Start: Requirements
- Step 1: Account Verification
- Step 2: Locate Velox Signal Provider
- Step 3: Configure Copier Settings
- Step 4: Select Risk Level
- Step 5: Activate Copy Trading
- Step 6: Final Verification & Go Live

Required Apps & Platforms

Before starting setup, download and install these applications. You will need both to manage your Velox account.

1. MetaTrader 5 (MT5)

Purpose: View live trades, monitor positions, and track account performance

Download MT5:

- Windows: Visit <http://www.metatrader5.com> or download directly
- Mac: Available on MetaTrader official website
- Mobile: Search 'MetaTrader 5' on Apple App Store or Google Play

Install & Connect to Velox:

1. Open MT5
2. Click: File → Open Account
3. Select: ThinkMarkets from broker list

4. Enter your ThinkMarkets MT5 login credentials (saved from account creation)
5. Click: Connect
6. You should now see your live account and can monitor Velox trades in real-time

2. ThinkPortal Web Platform

Purpose: Manage copy trading settings, configure Velox, and adjust risk levels

Access ThinkPortal:

- Visit: www.thinkmarkets.com the official ThinkMarkets link
- Log in with your ThinkMarkets account credentials
- No download required (web-based, accessible from any browser)

Use ThinkPortal to:

- **Access Copy** Trading settings
- Enable Velox signal provider
- Configure copier parameters
- Monitor account balance and equity
- Review trade history and performance

Before You Start: Requirements

Ensure you have the following before proceeding:

Account & Capital Requirements

- **Active ThinkMarkets live trading account (not demo)**
- New **Think Copy** account with the following specifications:
 - **Leverage: 1:500**
 - **Currency: USD**
- Minimum funded balance: USD \$1,000 (optimal for Velox scaling)
- Account in good standing (no restrictions or pending verification)
- Sufficient leverage available for XAUUSD trading
- No conflicting manual XAUUSD positions
- MT5 login and password saved and accessible

Technical Requirements

- Access to ThinkPortal (web browser)

- MetaTrader 5 (MT5) installed on desktop or mobile

Step 1: Account Verification

Verify your ThinkMarkets account is properly set up and ready for copy trading.

1. Create ThinkCopy Account

In ThinkPortal, navigate to: Account → Create New Account

Account Type: ThinkCopy

Leverage: 1:500

Currency: USD

Fund the account with minimum USD \$1,000

Save your MT5 login credentials (username and password)

2. Verify Account Status

In ThinkPortal, navigate to: Account → Settings → Profile

Confirm: Account is **Live** (not Demo)

Verify: No pending verification or compliance issues

Review: Current balance is USD \$1,000+

3. Connect to MT5

Open MetaTrader 5 on your device

Login using your ThinkCopy MT5 credentials

Verify you can see your account balance and XAUUSD trading pair

Step 2: Locate Velox Signal Provider

Navigate to the Copy Trading section and enable Velox as your signal provider.

4. Open Copy Trading in ThinkPortal

In ThinkPortal Dashboard, click: **Copy Trading** or **ThinkCopy**

Select your ThinkCopy account from the dropdown

Click: **Copier** (you are copying trades FROM Velox)

5. Search for Velox Bot (Official)

You should see a list of available signal providers

Find and select: **Velox Bot (Official)**

Click to view provider details

Step 3: Configure Copier Settings

These settings are **critical** for proper Velox execution. Do NOT deviate from these specifications.

Mandatory Settings

Setting	Value	Why Important
Volume Scaling	Autoscale	Scales with your equity
Compared Values	Equity	Tracks account growth
Direction	All	Don't filter trades
Small Volumes	Copy	Handles 5-position splits

How to Apply These Settings

6. Click 'Copy' on Velox Bot (Official)

This opens the copier configuration screen

7. Configure Volume Scaling

Find the "**Volume Scaling**" setting

Select: **Autoscale**

This ensures positions scale with your account equity

8. Set Compared Values

Find: "**Compared Values**" or "**Comparison Base**"

Select: **Equity**

This scales positions as your account grows or shrinks

9. Configure Direction Filter

Find: "**Trade Direction**" or "**Direction Filter**"

Select: **All** (or uncheck any filters)

Do NOT filter to Buy-only or Sell-only

10. Enable Small Volumes

Find: "**Small Volumes Handling**" or "**Skip Small Trades**"

Select: **Copy** (NOT Skip)

Velox uses 5-position splits; skipping will break execution

Step 4: Select Risk Level

Choose your risk tolerance. This is the ONLY setting you will adjust for different risk profiles.

Risk Level Options

Profile	Multiplier	Risk/Trade	Expected Drawdown
Conservative	0.50	1%	12–15%
Balanced ★	1.00	2%	24–30%
Aggressive	1.50	3%	35–45%

How to Set Your Risk Level

11. Locate 'Ratio Multiplier' Setting

In the copier configuration, find "Ratio Multiplier" or "Position Size Multiplier"

12. Select Your Risk Level

Choose from the table above:

- 1% = Conservative (Ratio: 0.50)
- 2% = Balanced ★ RECOMMENDED (Ratio: 1.00)
- 3% = Aggressive (Ratio: 1.50)

Understanding Your Risk

Velox executes each trade as a 5-position structure with all positions sharing a single 250-pip stop-loss. Risk is defined per complete setup:

- **1% Risk (Multiplier 0.50):** USD \$10 maximum loss if stop-loss is hit on a \$1,000 account
- **2% Risk (Multiplier 1.00):** USD \$20 maximum loss if stop-loss is hit on a \$1,000 account
- **3% Risk (Multiplier 1.50):** USD \$30 maximum loss if stop-loss is hit on a \$1,000 account

Example: On a \$1,000 account with 2% risk and a 250-pip stop-loss, maximum loss per trade = \$20.

Step 5: Activate Copy Trading

Once all settings are configured, enable copy trading to start receiving Velox signals.

13. Review Configuration Summary

A summary screen will show your settings:

- Provider: Velox Bot (Official)
- Allocation: (your chosen amount)
- Risk Level: (1%, 2%, or 3%)
- Volume Scaling: Autoscale

- Compared Values: Equity

14. Confirm All Settings Are Correct

Review the summary carefully. If incorrect, **go back and adjust**
Do NOT proceed if settings are wrong

15. Click Actions → Subscribe (or Activate)

In the top right, click the "ACTIONS" dropdown button
Select: "Subscribe" or "Activate"
You should see a confirmation message

Step 6: Final Verification & Go Live

Complete these final checks to ensure Velox is ready to trade on your account.

Launch Checklist

☐ ThinkCopy account created (1:500 leverage, USD)
☐ MT5 login credentials saved securely
☐ Account is Live (not Demo)
☐ Balance is USD \$1,000+
☐ MT5 connected and shows account balance
☐ Velox Bot (Official) located in Copy Trading
☐ Volume Scaling = Autoscale
☐ Compared Values = Equity
☐ Direction = All
☐ Risk Level selected (1%, 2%, or 3%)
☐ Copy Trading activated via ACTIONS → Subscribe
☐ No manual XAUUSD positions open

What to Expect After Activation

- **24–48 Hours:** Velox begins monitoring XAUUSD for trade opportunities
- **Live Trade Alerts:** View trades in real-time via MetaTrader 5
- **Trade Frequency:** Typically 2–3 per week (condition-dependent)
- **Pause Periods:** Zero trades indicate low volatility, not malfunction
- **Early Results:** First weeks/months may be flat or negative. Long-term consistency is the goal

Critical Do's & Don'ts

DO

- Monitor your account regularly (weekly)
- Keep account funded above minimum balance
- Review trade history regularly in MT5
- Check MT5 for trade alerts and updates
- Keep your MT5 login credentials secure

DO NOT

- Manually trade XAUUSD while copying Velox
- Change Volume Scaling or Compared Values settings
- Modify Ratio Multiplier without understanding the impact
- Close or reduce Velox positions manually
- Use fixed lot sizing (must use autoscale)
- Disable copy trading without backing up trade history
- Expect guaranteed profits (all trading has risk)

Troubleshooting

Q: I don't see Velox Bot (Official) in the provider list

A: Verify your account is in **Live mode (not Demo)**. Try refreshing the ThinkPortal page. If still not visible, **contact Velox support**.

Q: My settings don't match the guide

A: Look for equivalent settings: Volume → Autoscale, Comparison → Equity. If you're unsure, **DO NOT activate** and **contact Velox support** for clarification.

Q: No trades have executed yet

A: This is normal. Velox waits for quality conditions. Trades typically begin within 24–48 hours. If no activity after 1 week, verify copy trading is active and **contact Velox support**.

Q: I need to adjust settings

A: Only the Ratio Multiplier (risk level) can be adjusted. To change other settings, disable copy trading, reconfigure, then reactivate. **Contact Velox support** if you need assistance.

Q: Can't connect to MT5 with my credentials

A: Ensure you're using your **ThinkCopy MT5 credentials** (not your ThinkPortal credentials). Check that your password is correct and **contact Velox support** if the issue persists.

Final Notes

Congratulations. Your Velox setup is complete. Remember:

- Velox operates on **discipline, not prediction**. Trust the system to follow its rules.
- Early losses are normal. The system is designed for **long-term consistency**, not short-term perfection.
- Your role is to enable the system and **monitor account health**, not manage trades.
- Patience, consistency, and discipline are more valuable than prediction or luck.
